

# VSIGFILE Release Notes

Vsig 2.4.9.0 is a beta release for Vsig 2.5, scheduled for release Jan 08.

## Main changes in 2.4.9.0:

Many, many bug fixes.

## New features (see new help file for further details):

- Auto knob setup (enabled/disabled on User Preferences). Automatically sets the defaults for a knob to match the input to which it is connected
- Graphical indication of module ordering/disordering (enabled from View Menu, color set on User Preferences)
- Drag and drop to change ordering in graphics mode (hold down Shift key)
- Edit/Fix Disorder command - moves selected module after all source modules to fix indicated disorder
- Edit/Disconnect command - disconnect a repeating input without deleting it
- Vista-compatible help file
- Improved serial communications
- Zoom and other icons added
- Reset button for user preferences
- MIDI commands to load and save presets for Factor Stompboxes
- And others too numerous to mention
